

ABSTRACT

5 The invention relates to an arrangement, comprising a golf  
ball (1) which is used during the tee strike training and  
which, after the strike, is automatically returned with  
the aid of a substantially rigid line (3) secured to the  
10 ball (1) and, at its opposite, free end adapted to be  
anchored in the ground at a predetermined distance in  
front of the ball, and a ring (6) slidable along said line  
(3) and also on an elastic line (7), extending substan-  
tially across said rigid line (3), for cooperation with  
said elastic line (7) the free ends (8, 9) of which  
15 retaining the rigid line (3) are resiliently halted and  
then returned. The rigid line (3) does, along its front  
portion (5), exhibit marked sections (A-C) which indicate  
the distance from the ball (1) to the ring (6), inter-  
connecting the lines, and to the crossing elastic line (7)  
20 thereby informing the player about which club he is to use  
to realize the basic function of the arrangement, namely  
that the ball will returned to the tee location following  
a correct and perfect strike.
